On Feb 5, 2004 this sequence version replaced gi:13603473.
Genes were predicted from the integrated results of the following:
GENSCAN (http://CRR-081 mit-edu/GENSCAN.html), FGENESH

(http://www.softberry.com/), GeneMark.htm

(http://www.tigr.org/tdb/glimmerm/glmr_form.html), RiceHMM

(http://pgi.biology-gatech.edu/GeneMark.k), GlimmerM

(http://pgi.biology-gatech.edu/GeneMark.k), glimmerm

(http://www.tigr.org/tdb/glimmerm/glmr_form.html), sim4

(http://globin.cse.psu.edu/html/docs/sim4.html), gap2

(http://www.tigr.org/software/glimmerm/gl), BLASTN and BLASTN. The
genomic sequence was searched against NCBI NonRedundant Protein database

nceions were searched against NCBI NonRedundant Protein database

with BLASTP. ESTS represent the identified CDNA sequences using

BLASTN with the corresponding DDBJ accession no. and RGP clone
Full-length cDNAS represent the identified CDNA sequences using

On Dec 5, 2003 this sequence version replaced gi:26452805. An Arabidopsis full-length coll ibrary was constructed essentially set reported previously (Seki et al. (1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145; D.DNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1-B vector (Carninci et al. (2001) Genomics 77:79-90) digested with BamHI and Sall. This clone is in a modified pBluescript vector.
Please visit our web site (http://pfgweb.gsc.riken.go.jp/) for further details.

L. Submitted (125-NOV-2002) Motoaki Seki, RIKEN Genomic Sciences
Center; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa
230-0045, Japan (B-mail:mseki@gsc.riken.go.jp,
WRL:http://pfgweb.gsc.riken.go.jp, Tel:81-45-503-9625,
Fax:81-45-503-9586)
An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al. (1998) Plant J. 15:707-720;
Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI
and Xhol was ligated to modified Lambda FLC-1-E vector (Carninci et
al. (2001) Genomics 77:79-90) digested with BamHI and SalI.
This clone is in a modified pBluescript vector.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ThrGlyGlyGlyAlaVallleArgProlleAsnTrpArgTyrMetLysArgGlyLeuSer 189
                                                                                                                                                                                                                                                                                                 The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, alcohol metabolism, alcohol metabolism, altered anino acid metabolism, altered ester metabolism, altered anino acid metabolism, altered ester metabolism, altered ester metabolism, altered such estabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or metabolism, altered sterol, oxygenated terpene, or metabolism, altered sterol, in The DNA sequences of the invention may be used to provide disease resistance in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents a

Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having an improved property. Producing a plant having an improved property appared a plant with a recombinant construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide comprising a coding sequence for a polypeptide associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drought tolerance; plant disease resistance; galactomannan; lignin; plant growth regulator; heat tolerance; herbicide tolerance; homologous recombination; extreme osmotic condition tolerance; pathogen resistance; pest resistance; yield; photosynthesis; seed oil;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gossypium

useful for improving plant cold tolerance, manipulating growth rate in useful for improving plant cold tolerance, manipulating growth rate in clans by modification of the cell cycle pathway, improving plant drought tolerance, providing increased resistance to plant disease, producing galactomannan (or lignin or plant growth regulators), improving plant tolerance, improving plant tolerance to herbicides, increasing the rate of homologous recombination in plants, improving plant tolerance to extreme osmotic conditions or to pathogens or pests, improving yield the rate of homologous recombination in plants, improving yield and/or content, improving yield by modification of photosynthesis, modification of carbohydrate, nitrogen or phosphorus use and/or uptake, or improving yield by providing improved or plant growth and development under at least one stress condition. The polynucleotide and polypeptide may also be used in recombinant DNA constructs, in physical arrays of molecules, as plant breeding markers, continued form part of the princed specification, but was obtained to a Cotton plant cDNA of the invention. NOTE: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from USPTO at sequence and all S8798 protein sequences were not present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1010 BP; 286 A; 180 C; 234 G; 310 T; 0 U; 0 Other;

```

The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered glyceride metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, alkene or alkyne metabolism, hydrocarbon metabolism, ketone or quinone metabolism. The DNA sequences of the invention may be used to provide disease resistance in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents DNA sequence of the invention.

Sequence 660 BP; 194 A; 74 C; 168 G; 224 T; 0 U; 0 Other;

Sequences ABP31028-ABP35561 represent 4534 novel human proteins designated ORF (open reading frame) 1-4534, and sequences ABN75054-Cadesignated ORF (open reading frame) 1-4534, and sequences ABN75054-Cadesignated ORF (open reading frame) 1-4534, and sequences ABN75054-Cadesignated ORF (oplypeptides at least 80% identical to referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic cades sequences, vectors and host cells comprising ORFX caperation or activity, and methods of screening individuals for a predisposition or activity, and methods of screening individuals for a predisposition to an OPFX-associated disorder. The ORFX proteins of the invention have a wide carrivity, and methods of screening individuals for a predisposition to an OFFX-associated disorder. The ORFX proteins of the invention have a wide carrivity, and methods of screening individuals for a predisposition to an OFFX-associated disorder. The ORFX proteins of the invention have a wide carrivity, hasmostatic activity, themostation, cinhibit activity, hasmostatic activity, themostatic activity, hasmostatic activity, themostatic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, of bodily characteristics, fertility and behaviour. ORFX proteins, content proliferative disorders such as epilepsy and Alzheimer's felace to corgan transplantation, disorders such as psoriasis and benign tumours, corage diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester storage diseases, and infectious diseases caused by virzal, bacterial, corage diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester storage disease, and infection and coloning of homologous course of primers and probes, in the detection of ORFX genomic sequences or transcribts, in the identification and cloning of homologous contents, and in drug screening. The ORFX proteins and bother pathogens. Orfy protein, and in drug screening. The ORFX proteins are seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            _{\text{numunogens}} to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, altered amino acid metabolism, altered ester metabolism, altered setten metabolism, altered setten metabolism, altered setten metabolism, altered setten, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or metabolism, altered setten metabolism, altered setten metabolism, altered setten metabolism, bydrocarbon metabolism, ketone or quinone metabolism. The DNA sequences of the invention may be used to provide disease resistence in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents a

New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).
```

ID NO 1617; 14pp; English. Claim

The invention relates to a recombinant polymucleotide comprising any of the 58798 Cotton plant cDNA sequences mentioned in the specification.

Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having an improved property.

Comprises transforming a plant with a recombinant construct comprising a promoter region functional in a plant cell operably joined to a promoter region functional in a plant cell operably joined to a polypeptide associated with the property, and growing the transformed plant. The polypeptide is constituted in miproving plant cold tolerance for a polypeptide associated useful for improving plant cold tolerance, manipulating growth rate in plant tolerance, providing increased resistance to plant disease.

Concursing galactomannan (or lignin or plant growth regulators), improving plant tolerance to reach of the cell cycle pathway, improving plant tolerance to extreme osmocic conditions or plant growth regulators), improving teld by modification of photosynthesis, modifying seed oil or protein yield by modification of photosynthesis, modification of exception improved plant growth and development under at least one stress condition. The conformation in physical arrays of molecules, as plant breeding markers, or in computer-based storage and analysis systems. The present sequence is a cotton plant cDNA of the printed specification, but was obtained constructs, in physical arrays of molecules, as plant breeding markers, or patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence data for this constructed assembles are available, the remaining 5231 polynucleotide sequences were available, the remaining 52213 polynucleotides and all 58798 protein sequences were not present.

The invention relates to 17880 cotton expressed sequence tags (ESTB;
ACN45220-ACN63099). The ESTB were isolated from cDNA libraries generated
CC from primed seeds from variety DBSOB, mature seeds from
variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
tissue, developing fibres, carpel walls and septa from variety
CC welloping fibres, carpel walls and septa from variety
CC broteins or their fragments encoded by nucleic acid molecules of the
invention, and to transformed plants having a mucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTB are useful as
CC comprising a nucleic acid of the invention. The cotton ESTB are useful
CC comprising a nucleic acid of the invention and to determining whether genes are
CC comprising a nucleic acid of the invention. The cotton ESTB are useful
CC comprising a nucleic acid of the invention and to determining whether genes are
CC comprising a nucleic acid anily. The nucleic acid molecules may be
CC members of a particular gene family. The nucleic acid molecules are
CC seed for isolating a variety of agronomically significant genes
CC associated with plant growth, quality, yield, and could also serve as
CC links in metabolic and catabolic pathways. The nucleic acid molecules are
CC during seed germination or that may be used to mitigate stresses encountered
CC during seed germination. The ESTS additionally enable the acquisition of
CC during seed germination or that may be used to mitigate stresses encountered
CC during seed germination or the ESTS additionally enable the acquisition of molecular markers useful for and also permits the acquisition of molecular markers useful for detecting the expression level or pattern of a protein or mRNA and for
CC detecting the expression level or pattern of a protein or mRNA and for
CC detecting the presence or quantity of a protein by tissue printing. The
CC resequence requence represents a special count of the printed
CC sequence data for this patent did not form part of the printed

Carguence 2023, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
